

### **Wood burning stoves: Cost effective warmth this winter**

The Stove Industry Alliance (SIA) is seeking to reassure households that burning wood in an Ecodesign compliant wood burning stove is a highly efficient, cost effective, low carbon and low emission way to keep warm this winter.

Chair of the SIA, Andy Hill, commented: “Fears about fuel costs will affect every household this winter, and will hit those already in fuel poverty with a further crushing blow. A wood burning stove costs about a third of the price of electric heating and approximately 13% less than gas central heating for the average household under the current price cap. This saving will further increase as fuel prices continue to rise.”

“A clearSkies certified stove will use approximately a quarter of the amount of wood fuel compared to an open fire to give the same amount of heat. This cost effectiveness, combined with wood fuel’s renewable and sustainable credentials, and the ability to source fuel locally, helps to further reduce the carbon intensity of home heating, and means responsible wood burning has a clear role to play in our low carbon future.”

Here are the SIA’s top tips for cost effective, low carbon, low emission wood burning:

- Choose an Ecodesign compliant wood burning stove such as a [clearSkies](#) certified appliance. If you currently use an open fire or an older wood burning stove, i.e. one that is 10 or more years old, consider upgrading. A modern Ecodesign compliant wood burning stove releases up to 90% less emissions than an open fire and up to 80% less than a 10+ year old stove. Your local [SIA Retail Group member](#) can help advise on the best stove for you and your family.
- Ensure your stove is fitted and maintained by an appropriately qualified competent person such as [HETAS](#) or [OFTEC](#) registered.
- Only use wood fuel that is 20% moisture content or less such as [Ready to Burn](#) certified.
- Never use waste or chemically treated wood in your stove.
- When re-fuelling your stove, open the door by just a small amount and wait a few moments to allow the pressure in the stove to equalise, before opening the door fully to re-fuel. Close and latch the door immediately after re-fuelling.
- Have your chimney swept at least once a year by a qualified chimney sweep. You’ll find links to all the main UK chimney sweeping associations via the [Federation of British Chimney Sweeps](#).

**ENDS**

Editor’s Notes:

- The Stove Industry Alliance was formed in 2008 and is a trade association of stove manufacturers, distributors and retailers, wood fuel suppliers, flue and component manufacturers and other interested industry bodies.
- With over 40 manufacturing members and 60+ retail members, the SIA represents the stove industry in discussion with government departments such as Defra and BEIS, Welsh Government, Scottish Government and the Greater London Authority.
- The SIA represents the UK in CEFACD, the European stove association and work closely with a range of industry bodies such as Kiwa, HETAS, OFTEC, Woodsure and the Federation of British Chimney Sweeps.
